

# Clinical Development in Alzheimer's Disease and Other Dementias

**Rooted in Science, Focused on Quality, Based on Operational Excellence**

Worldwide Clinical Trials has long been involved in advancing treatment options for people with Alzheimer's disease (AD) and other dementias. Our experience spans all main drug classes studied in AD, and in partnership with innovative companies and the support of patients and their families, we are helping to shape the future of Alzheimer's disease and related dementia research including DLB and FTD.

Most recently, we are proud to have applied our years of experience to the conduct of a global Phase III study results, which led to the full approval of the drug. Our focus on clinical methodology and data integrity culminated in statistically significant results which offer hope to people with AD and their families.

**46**  
Studies

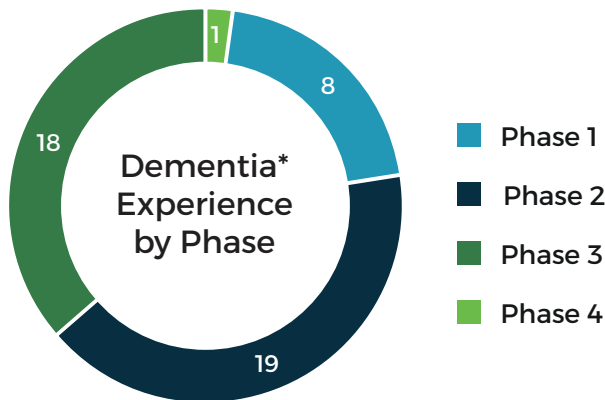

**2,650+**  
Sites  
**1,000+**  
Investigators

**35+**  
Countries  
(All Regions)

**16,000+**  
Participants

*\*Includes 4 DLB studies and 3 FTD studies*

## Our Approach

Exceptional scientific expertise and consultative approach

Strong site relationships and recruitment performance

Rater training for clinical outcome assessments performed in-house

Imaging and bioanalytic lab vendor partnerships

## Our Cognitive Task Force

Our in-house team of experienced Alzheimer's clinicians applies a structured methodology to help sites enroll patients, saving you time and budget.

**Let's talk about how we can support your next program.**
