

Schizophrenia Clinical Development at Worldwide Clinical Trials

Pioneering Advances in Schizophrenia Clinical Development

In the evolving landscape of psychiatric care, Worldwide stands alongside the sponsors at the forefront of treatment advancements, driving innovation in clinical development for schizophrenia. Our insights into schizophrenia are built on rigorous research methodologies and a deep understanding of the complexities involved in mental health disorders.

Our Schizophrenia Research Expertise

At Worldwide, our dedicated scientific and strategy leads bring more than 100+ years of combined expertise in clinical development to schizophrenia research, spanning a wide range of psychiatric disorders and neuroscientific assessments. We are equipped with the procedural knowledge essential for patient safety and the effective operation of schizophrenia clinical trials, setting the standard for industry practices.

100+

years of combined
experience across
our scientific and
strategy leads

Our Full-Service Experience in the Past Five Years

16+
Studies

4000+
Participants

500+
Sites

16
Countries NA/EMA

Focused on various aspects of schizophrenia, including acutely psychotic and maintenance treatment phases, negative symptoms, cognitive impacts, and innovative treatment methods

Across Phases 1-4, highlighting our commitment and extensive experience

Successful patient recruitment and strong relationships with top-tier investigative sites worldwide

Our Worldwide team brings both corporate and personal experience in developing treatment plans and projects for pediatric and adolescent populations with schizophrenia, in addition to our work with adults.

Our Services and Capabilities

Clinical Development Planning & Regulatory Expertise

Our services are tailored to schizophrenia research's unique challenges, ensuring compliance and optimizing trial success.

Operational Excellence

From fine-tuning protocol design to navigating the intricacies of execution, we prioritize solutions with an impact. Our expertise spans a broad spectrum of schizophrenia research areas, allowing us to provide our sponsors with significant, actionable insights, ensuring their clinical trial operations remain efficient as possible from start to finish.

Site Relationships

Our established network includes more than 500 sites experienced in schizophrenia trials globally. We utilize these relationships to recommend the best sites and countries tailored to the specific needs of each study.

Patient-Centric Recruitment

Research into schizophrenia presents distinct recruitment challenges, requiring a targeted approach towards caregivers and research sites. Our approach includes collaborating with existing clinical research networks globally, prioritizing community engagement, and minimizing the burdens faced by patients. This strategy enhances patient participation and retention, providing a smoother and more effective research process.

Rater Training and Data Quality

We ensure data quality through rigorous rater training and surveillance to minimize variability and increase the reliability of trial outcomes. Our in-house Clinical Assessment Technologies (CAT) team provides rater training and management of all scales and assessments common to schizophrenia studies, such as PANSS, SCID, and C-SSRS. When in-study data surveillance is provided, we review and offer feedback to site raters to re-align them with scale conventions and reduce rater drift to help protect the data quality for our studies.

We build constructive relationships with our study sites to enhance our strategy and data quality. Through regular communication and support, we foster a sense of partnership and guarantee protocols are accurately followed. This approach leads to smoother operations, accurate data collection, and a strong commitment to data integrity, making our study outcomes more reliable.

Partner with Worldwide

Your clinical development program deserves unparalleled scientific and operational expertise, innovative research methodologies, and a team dedicated to advancing psychiatric care. At Worldwide, we are committed to providing these services and more. To learn more about how our team can help support your schizophrenia clinical development program, visit our website today.
