ITE-BOIN12

on previous safe dose levels

THE-BOINIZ

Extends the BOIN12 design to address late-onset toxicity and efficacy

BOINIZ

Concurrently accounts for both efficacy and toxicity with targeted and immune therapies

Finds a set of multiple MTDs (MTD contour) by using a sequence of one-dimensional dose finding tasks (subtrials)

enrolled patients

Facilitates a combination of two drugs with multiple

dose levels each

additional data

Design with Confidence

The Clinical Research Methodology team at Worldwide can guide you in selecting and implementing the ideal BOIN design for your trial and, together with our operational teams, facilitate real-time decision-making throughout the course of your program.

To learn more about BOIN trial design and how we can assist your study, contact us.
